

MVP KIDS CARE VACCINE PHILOSOPHY

We firmly believe in the effectiveness of vaccines to prevent serious illness and to save lives. We firmly believe in the safety of our vaccines. We firmly believe that all children and young adults should receive all the recommended vaccines according to the schedule published by the Centers for Disease Control and Prevention and the American Academy of Pediatrics. We firmly believe, based on all available literature, evidence, and current studies, that vaccines do not cause autism or other developmental disabilities. We firmly believe that thimerosal, a preservative that has been in vaccines for decades and remains in some vaccines, does not cause autism or other developmental disabilities. We firmly believe that vaccinating children and young adults may be the single most important health-promoting intervention we perform as healthcare providers, and that you can perform as parents/caregivers. The recommended vaccines and the vaccine schedule are the results of years and years of scientific study and data gathering on millions of children by thousands of our brightest scientists and physicians. The vaccine campaign is truly a victim of its own success. It is precisely because vaccines are so effective at preventing illness that some people wonder whether they should be given. Because of vaccines, many people have never seen a child with polio, tetanus, whooping cough, bacterial meningitis, or even chickenpox, much less known a friend or family member whose child died of one of these diseases. Such success can make society complacent about vaccinating. But such an attitude, if it becomes widespread, can only lead to tragic results. After publication of an unfounded accusation (later retracted) that MMR vaccine caused autism in 1998, many people chose not to vaccinate their children. As a result of under immunization, the world has experienced large outbreaks of measles, with many deaths from disease complications. There are still annually thousands of cases of pertussis (whooping cough) in the United States, some resulting in deaths. Most victims are infants younger than six months of age.

When you do not vaccinate, you take a significant risk with your child's health and put at risk the health of others around you. We feel that refusing to vaccinate is incompatible with the philosophy of our practice. We are making you aware of these facts not to scare you or coerce you, but to emphasize the importance of vaccinating your child. We recognize that the choice may be a very emotional one for some parents. We will do everything we can to convince you that vaccinating according to the schedule is the right thing to do. However, should you have doubts, please discuss these with your healthcare provider in advance of your visit. In some cases, we may alter the schedule to accommodate parental concerns or reservations. Please be advised, however, that delaying or "breaking up the vaccines" to give one or two at a time over two or more visits goes against expert recommendations, and can put your child at risk for serious illness (or even death) and goes against our medical advice as providers at MVP KIDS CARE. Such additional visits could require additional co-pays on your part. Please realize that you will also be required to sign a "Refusal to Vaccinate" acknowledgement in the event of lengthy delays. Because we are committed to protecting the health of your children through vaccination, we require all our patients to be vaccinated.

Therefore, it is our policy at **MVP KIDS Care** to require our patients' acknowledgement and adherence to this vaccine philosophy. If you should refuse to vaccinate your child despite all our efforts, we will ask you to find another healthcare provider who shares your views. We do not keep a list of such providers, nor would we recommend any such physician. Please recognize that by not vaccinating, you are putting your child at unnecessary risk for life-threatening illness and disability, and even death. As medical professionals, we feel very strongly that vaccinating your child on schedule with currently available vaccines is absolutely the right thing to do to protect all children and young adults. Thank you for taking the time to read this policy. Please feel free to discuss any questions or concerns you may have about vaccines with any one of us.
